Summary

Frontend Software Engineer with 3+ years of experience building React and TypeScript products for fintech, government and AI platforms. Works best on complex, ambiguous problems where the details decide whether something actually works, and owns delivery end to end, from spec through to production.

Technical Skills

Frontend: React 19, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Slate, Tailwind CSS, Material UI
Core React: Hooks, Context API, custom hooks, React Router, responsive design, accessibility (ARIA, keyboard)
State & Data: Zustand, Redux, React Query, REST API integration
Tooling & Practice: Vite, Vitest, unit testing, Git, CI/CD (GitHub Actions), SonarQube, code review, Agile delivery
AI-assisted development: Claude Code, agent and workflow canvas UIs, streaming chat interfaces

Work Experience

Hapticware

04/2026 – Present

Frontend Engineer (AI Systems)

Pune, India

- Own **IndiSign's frontend**, including the Slate-based document editor with print-accurate PDF export, and the 4-state document lifecycle (Draft, Under Review, Approved, Rejected) across approvals, wallet billing and signing.
- Own the **Hapticware design system**: 20+ reusable, accessible React components, tested and published as a versioned package consumed across three applications.
- Built **6 ExoQ AI surfaces**: node-based agent canvas, workflow canvas, knowledge base, chat, notifications and the **Forge module** (CRM, CPQ, meeting routing).
- Delivered **performance optimisation** across the ExoQ application shell: lazy-loaded heavy routes, deduplicated redundant REST API calls and extracted shared components, cutting initial frontend load cost.
- Own the **frontend standards** for both products: write the specs two engineers build from, publish the shared component catalogue, and review every change that ships, across **200+ merged PRs** spanning five frontend codebases and **45+ peer reviews**.
- Ran **release readiness for IndiSign V2**, dev-testing every deliverable and owning the handoff checklist the team tracked the release against.
- Gather requirements from business stakeholders and author the specs that follow: **wallet refunds, invoicing and permission models**.

Quara AI Tech

09/2025 – 12/2025

Frontend Software Engineer

Remote

- Developed the **Wasalt real estate platform** in Next.js with map-based property discovery, real-time geolocation and advanced filtering over REST APIs.
- Implemented **multilingual support (English and Arabic)** with full RTL layout compatibility.
- Built analytics dashboards visualising **10K+ property listings** using Highcharts, tuned for responsive performance across mobile and desktop breakpoints. Role eliminated in a company-wide restructuring.

MoneyMul Technologies Private Limited

04/2024 – 09/2025

Frontend Software Engineer

Noida, India

- Implemented **Aadhaar-based eSign and virtual stamping workflows** for **eSignPro by Protean eGov Technologies**, a production government-compliant digital signature platform.
- Built wallet management, invoicing and document-verification modules for the **PAN 2.0 government platform**, delivered for government review.
- Developed secure **role-based dashboards** across 3 operational domains: financial operations, billing and payment workflows.
- Maintained a shared React component library across fintech modules, cutting duplicate code to **5%** and holding a **SonarQube A grade**.

Masai School

09/2023 – 03/2024

SDE Intern

Bengaluru, India

- Contributed React modules to an alumni engagement portal, including real-time notifications via Socket.IO.

Education

Amity University Online

06/2025 – Present

Bachelor of Computer Applications (BCA)

India

Masai School

07/2022 – 05/2023

Full Stack Web Development (Full Time)

Bengaluru, India
